

NAIT NUMBER ALLOCATION

This factsheet is intended to inform PICA farmers on what constitutes a NAIT location and how that location identifier is allocated.

As a PICA farmer, you are required to register all locations where you are in charge of NAIT animals.

A registered farm premises is known as a **NAIT location** and allows us to identify where NAIT animals are kept and who is in charge of them, on a day-to-day basis.

Each NAIT location is assigned a unique **NAIT number** as the farm premises identifier.

WHAT DEFINES A NAIT LOCATION?

A NAIT location may comprise of:

- A single property; or
- 2 or more contiguous (bordering) or non-contiguous properties within, or straddling the circumference of, a circle with a 10 kilometre radius.

If you are the person in charge of NAIT animals at multiple properties and one or more property is located outside of the 10km radius (e.g. the blue farm over page), you must register a separate NAIT number for each premises.

It is best practice that herds managed separately are registered as separate NAIT locations, meaning each will have a unique NAIT number. This way we can better trace and contain any disease outbreaks that may occur.

NAIT NUMBER ALLOCATION

NAIT LOCATION

The **yellow farms** may be registered as one NAIT location for the same PICA

The **blue farm** must be registered as a separate NAIT location as it is outside of the 10km radius

WHAT TO DO IF YOUR SITUATION CHANGES?

A NAIT number is fixed to a registered NAIT location. In the event you or your stock move to a new location, you will need to either:

- Apply to assign the existing NAIT number for the new premises to yourself as the PICA for that location; or
- Register a new NAIT number.

To change the person who is listed as the PICA for a registered NAIT number, call the OSPRI contact centre on **0800 482 463** or visit ospri.co.nz to download a PICA change application form.

ANIMAL MOVEMENTS

A movement must be recorded in the NAIT online system for **all movements of animals** between premises registered as separate NAIT locations, even if both have the same PICA. This ensures individual animals can be traced to their current and past locations, including when temporarily moved for grazing or mating.
