

# NAIT RELEASE NOTE

## RELEASE 38

### PURPOSE

---

The purpose of this document is to detail changes for the release at a high level. Changes can be upgrades, enhancements, defects or support requests.

### DETAILS OF CHANGE

---

Change Title	NAIT 38 – Several Features
Change Requestor / Business Owner	Julia Parr
Release date	10May20

### NEW FUNCTIONALITY

Add field for NZBN to organisation – Capture NZBN in Organisation Details to enable MPI view up-to-date organisation's contact details.

Increase tag reservation period – The current reservation period of 3 months is not long enough/ doesn't line up with actual business practices. Farmers will often buy order tags 6 months in advance and the tag manufacturer need the ability to cater for this scenario. This is to change the new reservation expiry rules from 3 to 6 months.

Data fix – This data fix is to bring current records in line with new reservation expiry rules - 3 months to 6 months.

Add additional animal types to "other animals" table – Alpacas, Emus, Llamas, Ostriches

Fixed the EXEMPT Category error message on KILLUpload for wrong Animal type.
